

New Hub and Spoke Model for the Single Payer Environment

Carefully Country-Tailored Models

Roles of the hub (health observatories)

- Data collection & analysis
- Coordinating role for the functionally-integrated health delivery model
- Linking public health issues with personal health issues
- Negotiation function with the single payer (uniform standards and protocols-based external budget) for the entire health delivery model including the reimbursement models with the other integrated delivery models
- Negotiating internal budget for the functionally-integrated providers
- Negotiate the volume and price of the separately contracted medical procedures
